This invention relates to nucleic acid sequences AAF93744 - AAF93916
which encode human secretory or membrane proteins represented by
AAB8817 - AAB8849. Included in the invention are primers
AAB8817 - AAB8849. Included in the invention are primers
CAAB8817 - AAB8849. Included in the invention are primers
CC AAB8817 - AAF92255 and AAF62235 which are used to isolate the
Production of antibodies directed against the proteins, and cDNA
CC sequences, which can be used in vaccines. The polynucleotide sequences
CC an be used in gene therapy. The polynucleotide sequences
CC can be used in gene therapy. The polynucleotide sequences
CC proteins they encode may be used with inappropriate secretory
CC protein/membrane protein expression. The nucleic acids and complementary
CC protein/membrane protein expression. The nucleic acids and complementary
CC sequences may also be used as DNA probes in diagnostic asso be
CC sequences and also be used as DNA probes in diagnostic asso be
CC used to similar nucleic acid sequences in samples. They may also be
CC used to study the expression and function of secretory proteins/membrane
CC antify modulators (agonists and antabolism. The polypeptides may be used
CC activity. The antibodies and antaponists may also be used as diagnostic agents for detecting the presence of the
CC be used as diagnostic agents for detecting the presence of the
CC be used as diagnostic agent which may be treated include rheumatoid
CC arthirities and diseases which may be treated include rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; primer; detection; diagnosis; antisense therapy; gene therapy; ss.
                                                                                                                                                                                                                                                                               Nucleic acids encoding secretory proteins/membrane proteins, useful in gene therapy or as candidate target molecules in drug development - \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an oligonucleotide complementary complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises a 3'-end sequence, where the oligonucleotide comprises a 3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the particularly full-length cDNAs. The primers are also useful for the contection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also useful for the cDNAs easily without any specialised methods. AAH318528 and AAH38583 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13629 to AAH13632 represent human amino acid sequences; and AAH13632 to AAH13632
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Secreted protein; immunosuppressive; antiarthritic; antirheumatic; antiproliferative; cytostatic; cardiant; vasotropic; cerebroprotective; nootropic; neuroprotective; antibacterial; virucide; fungicide; human;

The invention provides novel human secreted proteins and polynucleotides concoding them. The secreted proteins can be expressed by standard recombinant methodology. The secreted proteins and polynucleotides are recombinant methodology. The secreted proteins and polynucleotides are used to prevent, treat or ameliorate a medical condition in e.g. humans, also be used in diagnosing a pathological condition. The antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnosit immunosassays e.g. radioimmunoassays or enzyme linked immunosorbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, or phyperpides and also be coular disorders e.g. corneal infection. The polyperides can also be coular disorders e.g. corneal infection. The polyperides can also be supporting cell culture of primary tissues, to reqenetate tissues and in chemotaxis. The polypeptides can also be used as a food additive or chemotaxis. The polypeptides can also be used as a food additive or concase in the present and provider conditions can be nown ascreted protein encoding cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present invention describes primer sets for synthesising 5602

full-length cDNAs defined in the specification. Where a primer set

comprises: (a) an oligo-dT primer and an oligouncleotide comptiementary

to the complementary strand of a polynucleotide which comprises one of

to the s602 nucleotide sequences defined in the specification, where the

conjouncleotide comprises at least 15 nucleotides; or (b) a combination

or an oligonucleotide comprising a sequence complementary to the

complementary strand of a polynucleotide which comprises a 5'-end

sequence and an oligonucleotide comprising a sequence complementary to the

complementary strand of a polynucleotide which comprises a 5'-end

sequence and an oligonucleotide comprises a 3'-end sequence complementary to the

conjouncleotide which comprises a 3'-end sequence complementary to a

polynucleotide which comprises a 3'-end sequence complementary to a

conjouncleotide comprises a 1-east 15 nucleotides and the combination of

the 5'-end sequence 3'-end sequence; selected from those defined in

the specification. The primer sets can be used in antisense therapy and

in gene therapy. The primers are useful for synthesising polynucleotides,

particularly full-length cDNAs. The primers are also useful for the

chapter conditions and/or diagnosis of the abnormality of the proteins encoded by

the full-length cDNAs. The primers allow obtaining of the full-length

cDNAs easily without any specialised methods. AAH03618 and

AAH03633 represent human anino acid sequences; and AAH13629 to AAH13632

represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .;

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set full-length cDNAs defined in the specification. Where a primer set complises: (a) an oligo-dT primer and an oligonuclectide complementary trand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprises a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the oligonucleotide which comprises a 3'-end sequence. Where the oligonucleotide which comprises a 1'-end sequence, and sequence, where the oligonucleotide comprises a 3'-end sequence, where the oligonucleotide comprises a 1'-end sequence, and sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the particularly without any specialised methods. Ant03166 to AAM13628 and AAM13633 represent human amino acid sequences; and AAM13629 to AAM13632 or AAM56593 represent human amino acid sequences; and AAM13629 to AAM13632 or AAM56593 represent human amino acid sequences; and AAM13629 to AAM13632 or AAM56000 and AAM13633 to AAM56000 and AAM13633 to AAM5600 and AAM13633 and AAM5600 and AAM13633 and AAM5600 and AAM560
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .;

The antigen has been designated mesothelium. The clone was isolated from a HeLa S3 cDNA library by screening with monoclonal antibody K1, previously shown to react vith an antigen on human ovarian tumour OVCAR-3 cells. A 40 kDa precursor by several processing steps. A claimed method for precursor by several processing steps. A claimed method for precursor by several processing steps. A claimed method for precursor by several processing at least 10 contiguous amino acids of mesothelin involves: (a) providing a chimeric molecule comprising the effector molecule attached to a tumour cell. Capecifically binds to mesothelin; and (b) contacting the tumour with the chimeric molecule such that the chimeric mo

DNA encoding the mesothelin antigen can be transfected into a mammal containing tumour cells to screen for drugs useful in cancer treatment. Antisense oligonucleotides can be used to inhibit mesothelin expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    methods can be used to detect tumour cells and to inhibit the growth of cells bearing mesothelin. Mesothelin-derived antigens may be used in vaccines for the inhibition or prevention of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gene transcription product, genetic markers, tagging; in vivo; transcription; mapping; locations; chromosomes; chromosomal; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       which encode human secretory or membrane proteins represented by AAB8913T - AAB88419. Included in the invention are primers AAF93917 - AAF94295 and AAF62232 - AAF62235 which are used to isolate the CDNA sequences of the invention. The invention also includes methods for the production of antibodies directed against the proteins, and cDNA sequences, which can be used in vaccines. The polynucleotide sequences can be used in gene therapy. The polynucleotide sequences
                                                                                                                                 library as part of a large set of ESTS which can be used as markers for human genes transcribed in vivo. They can be used to facilitate tagging of most human genes, for mapping locations of expressed genes on chromosomes, for individual or forensic identification, for mapping locations of disease-associated genes, for identification of tissue type, and for prepn. of antisense sequences, probes and constructs. EST02392 has a "poor" coding probability as evaluated using the coding-region prediction program CRM. See also AAQ59041-Q61440.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Primer specific for DNA encoding secretory/membrane protein SEQ ID 426.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acids encoding secretory proteins/membrane proteins, useful in

proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate secretory protein/membrane protein expression. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples. They may also be used to study the expression and function of secretory proteins/membrane polypeptides and their role in metabolism. The polypeptides may be used as antigens in the production of antibodies against them and in assays to identify modulators (agonists and antagonists) of expression and actagonists may also be used as therapeutic agents to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of the polypeptides in samples (e.g. by enzyme linked immunosorbant assay (ELISA). Examples of diseases which may be treated include rheumatoid arthritis and diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; foetal protein; cytostatic; immunosuppressive; immunostimulant; nootropic; neuroprotective; thrombolytic; osteopathic; antiinflammatory; gene therapy; antiense therapy; cancer; immune disorder; growth disorder; osteoporosis; thrombolytic disorder; netrous system disorder; inflammation; expressed sequence tag; EST; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel fetal proteins useful for the treatment and diagnosis of diseases associated with dysfunction of the protein e.g. cancers, immune disorders, growth disorders, thrombolytic disorders, nervous system disorders and inflammation -

This invention describes novel nucleic acid sequences (A) that are expressed at high level in prostatic tumor tissue and encode gene products or their fragments. The products of the invention have antitumor activity. Polypeptides (I) encoded by (A) are used: (i) for identifying agents for treatment of prostatic cancer and (ii) for therapy of prostate cancer, optionally where expressed by gene therapy methods. (A) is also used to lasolate full-length genes (for gene therapy) and for recombinant production of (1), which can be used to raise specific antibodies. (A) are identified by assembly of ESTS (expressed sequence tags) before they are analyzed for expression pattern (tissue specificity). This approach eliminates many of the false results, as regards tissue specificity, associated with known methods that use single (usually short) ESTS. AAX33423-233476 represent expressed sequence tags described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ä
polynucleotides comprising one of 477 sequences fully defined in the specification. The foetal polynucleotides and polypeptides are useful in the treatment and diagnosis of diseases such as cancers, immune disorders, growth disorders (e.g. osteoporosis), thrombolytic disorders, nervous system disorders and inflammation. The present sequence is a full length cDNA which was assembled using expressed
                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

AAX91802 to AAX31989 represent PCR primers used in the isolation of the PG polypeptides. The PG polypeptides have antibarterial activity with a vaccine mechanism of action. The PG polypeptides can be used as vaccines especially against Porphorymonas qingivalis. Probes can be used to detect Porphorymonas gingivalis in standard hybridisation assays. Porphorymonas gingivalis is involved in periodontal disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The present sequence represents a kidney injury associated molecule (KIM) cDNA clone. KIM proteins can be administered therapeutically by expressing KIM enroding polynucleotides, to promote growth and/or survival of damaged tissue (e.g. renal tissue), since the KIM proteins are upregulated in injured or regenerating (especially renal) tissues.

KIM fusion proteins, conjugates, antibodies and vectors can also be used therapeutically, e.g. these or the KIM proteins may be included with an acceptable carrier in pharmaceutical compositions, useful for therapy. prophylaxis of conditions associated with disfunction/disregulation of KIM genes or proteins, especially renal diseases or impairments of renal phylaxis of conditions associated with disfunction/disregulation of KIM genes or proteins, especially renal diseases or impairments of renal internalised into cells, can disrupt expression of a cellular KIM gene, olynucleotides can be used to produce antisense sequences which, when internalised into cells, can disrupt expression of a cellular KIM gene, also useful in therapy (e.g. to block the growth of tumours dependent on KIM for growth) or compositions. The proteins and polynucleotides are useful diagnostically e.g. to detect and quantify renal injury/disease function), or abnormal responses to tissue injury (indicative of increased risk, or presence of, renal injury or impaired increased risk, or presence of, an autoimmune response or abnormal and proteins and polynucleotides are an example responses to tissue injury (indicative of increased risk, or presence of, an autoimmune response or abnormal and proteins and polynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            tissue growth arising from/affecting renal tissue). The proteins can also be used to locate KIM-producing cells (especially specific loci, e.g. tissue masses abnormally producing/expressing KIM such as tumours arising from/affecting renal tissue), by contacting cells with an imageable KIM-binding reagent and imaging reagent accumulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Kidney injury-associated molecule, KIM, polypeptides - upregulated in injured or regenerating tissues, useful to promote tissue growth and regeneration, especially to treat renal conditions
                                                                                                                                                                                                          Kidney injury associated molecule; kidney injury related molecule; KIM; tissue growth promotion; regeneration; renal condition; acute renal failure; acute nephritis; tumour; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Porphorymonas gingivalis (PG) polypeptide sequences given in AAY34318 to AAAY3483. AAX34802 to AAX91899 represent PCR primers used in the lasolation of the PG polypeptides. The PG polypeptides have antibacterial activity with a vaccine mechanism of action. The PG polypeptides can be used as vaccines sepecially against Porphorymonas gingivalis. Probes can be used to detect Porphorymonas gingivalis in standard hybridisation assays. Porphorymonas gingivalis is linvolved in periodontal disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence encodes a novel adenovirus chimeric protein, Pig4KN. This protein is used in a method for the construction of novel monomers having an N-terminus of an adenoviral fibre protein and a trimerisation domain. Such monomers have lower affinity for native substrate than the native adenoviral fibre trimer. Cell lines containing such monomers are used (1) to propagate adenovirus for use as gene therapy vectors (for in vitro or in vivo applications, (ii) as reagents for studying adenoviral attachment and infection, and (iii) in receptor-ligand interaction assays. The new viruses produce minimal ectopic infection (they can not infect native host cells) so are safer as vectors and can be engineered for selective
                                                                                                                                                             Pig4KN; chimeric protein; adenoviral fibre protein; monomer; infection; trimerisation domain; affinity; substrate; gene therapy vector; attachment; interaction assay; ss.

AAZ36228-49 encode bone marrow secreted proteins of human bone marrow stromal cells. The proteins can exhibit cytokine, cell proliferation, or cell differentiation activity (either inducing or inhibiting). They can be used to support colony forming cells or factor dependent cell lines, to regulate hematopoiesis, and to treat myeloid or lymphoid cell deficiencies. In addition, they may be used to support the growth and proliferation of erythroid progenitor cells, and to treat various anemias. They can have colony stimulating factor (CSF) activity and can be used to support the growth and proliferation of myelo-supports or macrophages, to prevent or treat myelo-supports and platelets, thereby allowing prevention or treatment megakaryocytes and platelets, thereby allowing prevention or treatment of platelet disorders such as thrombocytopenia, to support the growth and proliferation of hematopoeitic stem cells, either in place of or in conjunction with platelet transfusions, to treat stem cell disorders, or to repopulate the stem cell compartment after irradiation or chemotherapy. They can be used for growth or differentiation of bone, cartilage and conjunction and replacement, and in the treatment of burns, incisions and ulcers, to induce cartilage and/or bone growth in circumstances where bone is not normally formed and thus have an application in healing bone fractures and cartilage dange or defects, prophylactic use in the improved fixation of artificial

This protein is used in a method for the construction of novel monomers having an N-terminus of an adenoviral fibre protein and a trimerisation domain. Such monomers have lower affinity for native substrate than the native adenoviral fibre trimer. Cell lines containing such monomers are used (i) to propagate adenovirus for use as gene therapy vectors (for in vito or in vivo applications, (ii) as reagents for studying adenoviral attachment and infection, and (iii) in receptor-ligand interaction assays. The new viruses produce minimal ectopic infection (they can not infect native host cells) so are safer as vectors and can be engineered for selective targeting to other cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 22, A Sequence 22, A Sequence 27, A Sequence 27, A Sequence 27, A Sequence 2, Ap Sequence 2, Ap Sequence 5, Ap Sequence 5, Ap
